Project 2.2

Project 2.5

PROJECT 2.4 Ecological Services and Dis-services Provided by Rainforest Arthropods Project Leader: *Dr Saul Cunningham (CSIRO)*

This project aims to determine the arthropod services and dis-services to agriculture and forestry emanating from rainforest, and assess their economic significance. This will be achieved by examining the processes of pollination, biological control of pests and herbivory in production systems adjacent to, and far from, rainforest. In all these studies, a key variable will be distance from rainforest patches.

POSTGRADUATE STUDENTS

Katie PRITCHARD (JCU) Masters
Rainforest pollinators of custard apple
